1699500001

HPK 200 Accessory Kit for HD and Medium Duty Applications

The cost-effective, safe alternative for heavy-duty preventive maintenance and repair

Test heavy-duty exhaust systems safely and efficiently in 15 minutes or less

Troublesome intake and exhaust leaks are commonly diagnosed with outdated and inefficient equipment and methods.

These methods are time consuming, dirty. and frequently result in replacement of the wrong components. Low pressure testers, soapy water, and supersonic listening devices can cause revenue generating trucks to spend unnecessary days in the repair facility, out of service.

Bosch is addressing these problems with a new, cost-effective, and safe alternative that will change standard practices for heavyduty preventive maintenance and repair. The **HPT 500** uses regular compressed air to reach and maintain a variable pressure of 2 to 20 psi throughout the vehicle's intake and exhaust system. Compressed air mixed with a visual vapor is forced into the system, simulating the load of a running engine: both naturally aspirated and forced induction (turbo and supercharged). Many upstream leaks will only appear under these boosted pressures. The dense, highly visible vapor flows throughout the truck's hoses, tubes and related components and escapes anywhere there is a leak.
